

PERKLONE™ HIGH PERFORMANCE CLEANING INTO THE FUTURE

Banner Chemicals Group UK
Flying the flag of excellence for over 150 years

Perklone™ is a leading brand of specially stabilised perchloroethylene and one of a range of effective cleaning solvents from Banner Chemicals UK. Our UK manufacturing site, one of the largest of its kind in Europe, is approved to ISO 9002:2004 quality assurance standard and is approved ISO 14001:2004 environmental management standard accreditation. Together with the back-up of Banner Chemicals UK extensive technical and application experience, you can be assured of the best product quality and customer service now and in the future.

Perklone™ is an effective and efficient cleaning solvent whose unique combination of chemical and physical properties, including non-flammability, high solvency power, high boiling point and ease of recovery, make it a popular solvent for a wide range of cleaning applications. In particular, it has been the solvent of choice in dry cleaning for over fifty years.

Special grades of **Perklone™** are used by the oil refining industry for catalyst regeneration, as a cleaning solvent and printing aid in the film industry and as a feedstock for the manufacture of HFA134a, the growing replacement for ozone-depleting CFC refrigerants and propellants.

Perklone™ grades are based on perchloroethylene, one of the most thoroughly understood industrial chemicals; its low environmental impact and well researched health effects give users the confidence that by following manufacturer's guidance it can be used safely and effectively in industrial applications.

Perklone™ is available in a number of grades specially formulated for maximum effectiveness in particular applications:

Perklone™ D: General purpose stabilised grade for dry cleaning, textile processing and leather scouring.

Perklone™ DX Plus: Premium stabilised grade developed for optimum performance in modern closed-circuit dry cleaning machines.

Perklone™ MD: Formulated for safe and efficient vapour and liquid/vapour degreasing of most engineering metals, including light metals and alloys.

Perklone™ EXT: Special grade of perchloroethylene for critical processes such as catalyst regeneration and film cleaning.
